UNIT E Use unit fractions to compose and decompose fractions with models and symbols		
Grade	Curriculum Expectations	
1	 divide whole objects into parts and identify and describe, through investigation, equal-sized parts of the whole, using fractional names (e.g., halves; fourths or quarters). 	
2	• determine, through investigation using concrete materials, the relationship between the number of fractional parts of a whole and the size of the fractional parts (e.g., a paper plate divided into fourths has larger parts than a paper plate divided into eighths) (Sample problem: Use paper squares to show which is bigger, one half of a square or one fourth of a square.).	
2	• regroup fractional parts into wholes, using concrete materials (e.g., combine nine fourths to form two wholes and one fourth);	
3	 divide whole objects and sets of objects into equal parts, and identify the parts using fractional names (e.g., one half; three thirds; two fourths or two quarters), without using numbers in standard fractional notation. 	
4	 represent fractions using concrete materials, words, and standard fractional notation, and explain the meaning of the denominator as the number of the fractional parts of a whole or a set, and the numerator as the number of fractional parts being considered; 	
4	• compare and order fractions (i.e., halves, thirds, fourths, fifths, tenths) by considering the size and the number of fractional parts (e.g., $\frac{4}{5}$ is greater than $\frac{3}{5}$ because there are more parts in $\frac{4}{5}$; $\frac{1}{4}$ is greater than $\frac{1}{5}$ because the size of the part is larger in $\frac{1}{4}$);	
4	• compare fractions to the benchmarks of 0, $\frac{1}{2}$ and 1 (e.g., $\frac{1}{8}$ is closer to 0 than $\frac{1}{2}$; $\frac{3}{5}$ is more than $\frac{1}{2}$);	
4	• demonstrate and explain the relationship between equivalent fractions, using concrete materials (e.g., fraction circles, fraction strips, pattern blocks) and drawings;	
4	• count forward by halves, thirds, fourths, and tenths to beyond one whole, using concrete materials and number lines (e.g., use fraction circles to count fourths: "One fourth, two fourths, three fourths, four fourths, five fourths, six fourths,");	
4	• determine and explain, through investigation, the relationship between fractions (i.e., halves, fifths, tenths) and decimals to tenths, using a variety of tools (e.g., concrete materials, drawings, calculators) and strategies (e.g., decompose $\frac{2}{5}$ into $\frac{4}{10}$ by dividing each fifth into two equal parts to show that $\frac{2}{5}$ can be represented as 0.4)	
5	• represent, compare, and order fractional amounts with like denominators, including proper and improper fractions and mixed numbers, using a variety of tools (e.g., fraction circles, Cuisenaire rods, number lines) and using standard fractional notation;	
5	• demonstrate and explain the concept of equivalent fractions, using concrete materials (e.g., use fraction strips to show that $\frac{3}{4}$ is equal to $\frac{9}{12}$);	

 • determine and explain, through investigation using concrete materials, drawings, and calculators, the relationship between fractions (i.e., with denominators of 2, 4, 5, 10, 20, 25, 50, and 100) and their equivalent decimal forms (e.g., use a 10 x 10 grid to show that \$\frac{2}{5} = \frac{40}{100}\$, which can also be represented as 0.4). • represent, compare, and order fractional amounts with unlike denominators, including proper and improper fractions and mixed numbers, using a variety of tools and using standard fractional notation; • determine and explain, through investigation using concrete materials, drawings, and calculators, the relationships among fractions, decimal numbers and percents. • divide whole numbers by simple fractions and by decimal numbers to hundredths, using concrete materials; • use a variety of mental strategies to solve problems involving the addition and subtraction of fractions and decimals; • use a variety of mental strategies to solve problems involving the addition and subtraction of fractions and the multiplication of that fraction by a whole number; • demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; • determine, through investigation, the relationships among fractions, decimals, percents, and ratios; • represent, compare, and order rational numbers; • translate between equivalent forms of a number; • use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; • represent the multiplication and division of fractions, using a variety of tools and strategies; • solve problems involving addition, subtraction, multiplication, and division with simple fractions. • solve problems requiring the manipulation of expressions arising from applicati		
and 100) and their equivalent decimal forms (e.g., use a 10 x 10 grid to show that $\frac{1}{5} = \frac{100}{100}$, which can also be represented as 0.4). • represent, compare, and order fractional amounts with unlike denominators, including proper and improper fractions and mixed numbers, using a variety of tools and using standard fractional notation; • determine and explain, through investigation using concrete materials, drawings, and calculators, the relationships among fractions, decimal numbers, and percents. • divide whole numbers by simple fractions and by decimal numbers to hundredths, using concrete materials; • use a variety of mental strategies to solve problems involving the addition and subtraction of fractions and decimals; • add and subtract fractions with simple like and unlike denominators, using a variety of tools and algorithms; • demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; • determine, through investigation, the relationships among fractions, decimals, percents, and ratios; • represent, compare, and order rational numbers; • translate between equivalent forms of a number; • use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; • represent the multiplication and division of fractions, using a variety of tools and strategies; • solve problems involving addition, subtraction, multiplication, and division with simple fractions. • simplify numerical expressions involving integers and rational numbers, with and without the use of technology; • solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; • solve problems requiring the manipulation of expressions arising from applications of percent, direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphi	E	calculators, the relationship between fractions (i.e., with denominators of 2, 4, 5, 10, 20, 25, 50,
 represent, compare, and order fractional amounts with unlike denominators, including proper and improper fractions and mixed numbers, using a variety of tools and using standard fractional notation; determine and explain, through investigation using concrete materials, drawings, and calculators, the relationships among fractions, decimal numbers on hundredths, using concrete materials; divide whole numbers by simple fractions and by decimal numbers to hundredths, using concrete materials; use a variety of mental strategies to solve problems involving the addition and subtraction of fractions and decimals; add and subtract fractions with simple like and unlike denominators, using a variety of tools and algorithms; demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; represent, compare, and order rational numbers; translate between equivalent forms of a number; use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the expression of percents, fractions, and decimals in their equivalent	3	
and improper fractions and mixed numbers, using a variety of tools and using standard fractional notation; determine and explain, through investigation using concrete materials, drawings, and calculators, the relationships among fractions, decimal numbers and percents. divide whole numbers by simple fractions and by decimal numbers to hundredths, using concrete materials; vuse a variety of mental strategies to solve problems involving the addition and subtraction of fractions and decimals; add and subtract fractions with simple like and unlike denominators, using a variety of tools and algorithms; demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; represent, compare, and order rational numbers; vuse estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation, speries of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate		·
calculators, the relationships among fractions, decimal numbers, and percents. divide whole numbers by simple fractions and by decimal numbers to hundredths, using concrete materials; use a variety of mental strategies to solve problems involving the addition and subtraction of fractions and decimals; demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; represent, compare, and order rational numbers; translate between equivalent forms of a number; use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent	6	and improper fractions and mixed numbers, using a variety of tools and using standard
concrete materials; vuse a variety of mental strategies to solve problems involving the addition and subtraction of fractions and decimals; add and subtract fractions with simple like and unlike denominators, using a variety of tools and algorithms; demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; represent, compare, and order rational numbers; translate between equivalent forms of a number; use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent	6	
fractions and decimals; add and subtract fractions with simple like and unlike denominators, using a variety of tools and algorithms; demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; frepresent, compare, and order rational numbers; franslate between equivalent forms of a number; sues estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. pu simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent	7	
algorithms; demonstrate, using concrete materials, the relationship between the repeated addition of fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; represent, compare, and order rational numbers; translate between equivalent forms of a number; use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent	7	fractions and decimals;
fractions and the multiplication of that fraction by a whole number; determine, through investigation, the relationships among fractions, decimals, percents, and ratios; represent, compare, and order rational numbers; translate between equivalent forms of a number; sees estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. pu simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent	7	
ratios; **represent, compare, and order rational numbers; **translate between equivalent forms of a number; **use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; **erpresent the multiplication and division of fractions, using a variety of tools and strategies; **erpresent the multiplication and division of fractions, using a variety of tools and strategies; **esolve problems involving addition, subtraction, multiplication, and division with simple fractions. **esolve problems involving addition, subtraction, multiplication, and division with simple fractions. **esolve problems involving integers and rational numbers, with and without the use of technology; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; **esolve problems requiring the manipulation of expressions arising from applications of percent, rat	7	ı i i i i i i i i i i i i i i i i i i i
 translate between equivalent forms of a number; use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	7	
 translate between equivalent forms of a number; use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	8	• represent, compare, and order rational numbers;
 use estimation when solving problems involving operations with whole numbers, decimals, percents, integers, and fractions, to help judge the reasonableness of a solution; represent the multiplication and division of fractions, using a variety of tools and strategies; solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	8	·
 solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	8	
 solve problems involving addition, subtraction, multiplication, and division with simple fractions. simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	8	• represent the multiplication and division of fractions, using a variety of tools and strategies;
 simplify numerical expressions involving integers and rational numbers, with and without the use of technology; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	8	· · · · · · · · · · · · · · · · · · ·
 ratio, rate, and proportion; solve problems requiring the manipulation of expressions arising from applications of percent, ratio, rate, and proportion; identify, through investigation, properties of the slopes of lines and line segments (e.g., direction, positive or negative rate of change, steepness, parallelism, perpendicularity), using graphing technology to facilitate investigations, where appropriate solve problems requiring the expression of percents, fractions, and decimals in their equivalent 	9D	• simplify numerical expressions involving integers and rational numbers, with and without the
